

# Contents

1. Basic concepts in number theory
2. Exponents of prime factors
3. Lift the exponent
4. Orders and primitive roots
5.  $k^{th}$  residue
6. Problems in polynomial sequences
7. Exponents of prime factors in factorials
8. Exponents of prime factors in binomial coefficients
9. Factorials and symmetric polynomials
10. Congruences of binomial coefficients
11. Congruences of Summations
12. Problems in second-order linear recurrent sequences
13. Problems in recurrent sequences
14. Problems in newly defined sequences
15. Problems in additive combinatorial number theory
16. Problems in prime factor sets
